

Dear Sirs:

Satellite radio is one of the great technological developments for the consumer in recent years. It is not yet profitable and will never be if some commercial interest have their way. Please allow weather & traffic reports on satellite radio and don't force us into a steady stream of commercials as is now the case with commercial radio & TV.

Please rereject NAB's petition 04-160. I will also apprise my senator & congressman of this threat on the most significant addition to quality broadcast since the advent of public radio & public TV.

Thank you for your consideration

Edward L. Robinson, Ph.D.
